- Presentation of ELCA and the Committee of Firms
- Shromáždění členů Svaz zakládání a údržby zeleně
Assembly of the Association SZÚZ

30 January 2019 – Lednice visit to the Castle Green House

The Green House was built 1843-45 to Georg Wingelmüller's design. It was built partly on the location of the former wooden orangery founded in 1717. In 1842, prince Alois II. Josef decided to demolish the orangery and ordered his architect Jiří Wingelmüller to build a new, modern structure that would use steel, cast iron and glass as main materials (these materials were rather unusual at the time of the construction). An English engineer P. H. Desvignes probably contributed to this work. The construction cost almost 160 thousand Florins. The self-supporting structure of the greenhouse is secured against overload and the combined iron – cast-iron columns are fitted with decorative cast-iron sheaths.

You can find a very nice photo overview in the link
